

Solving plastic and garbage pollution

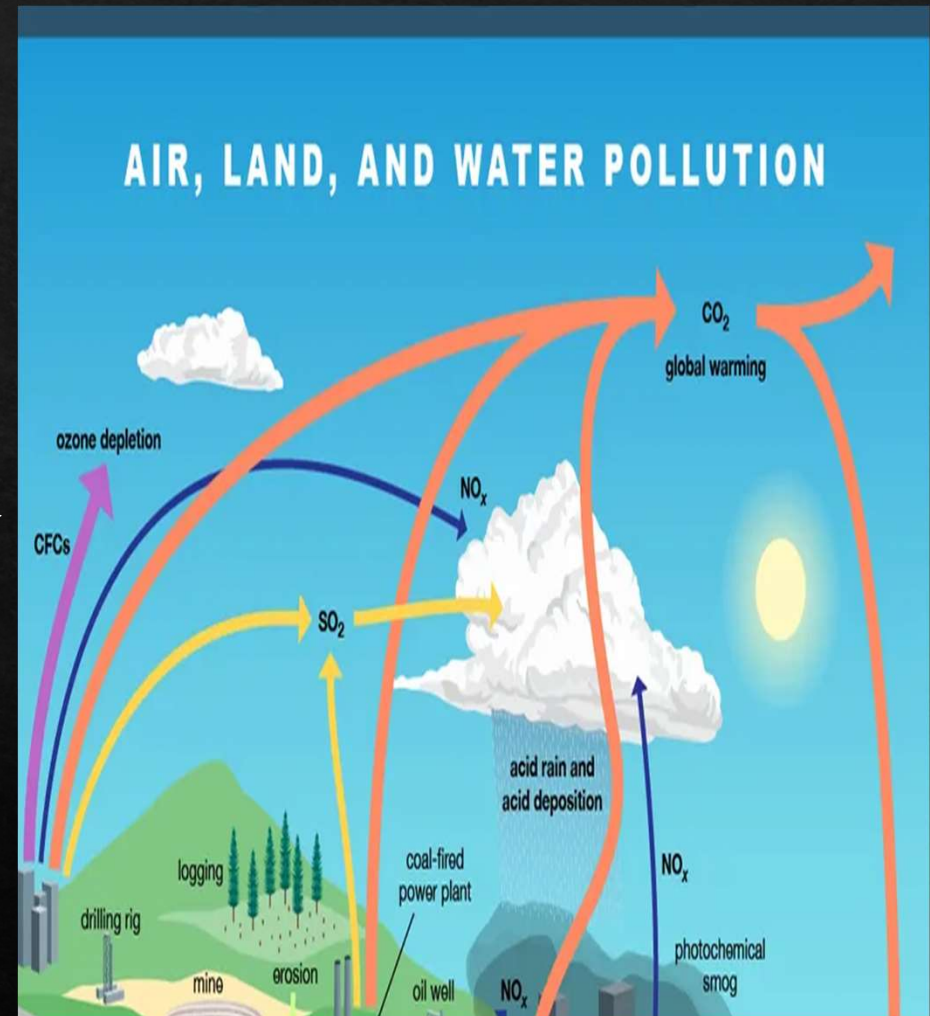

◆ The enforcement of fines for littering has proven difficult, but fees or outright bans on items like foam food containers and plastic shopping bags are now common, as is the redemption of deposits by returning beverage bottles to recycling centers. So-called Extended Producer Responsibility (EPR) schemes hold manufacturers of certain items responsible for creating infrastructure to take back and recycle the products they produce.

Informing about a polluted place:

You need to capture the attention of environmental enthusiasts by sharing pictures and the location of areas with high pollution. After that, you should invite everyone by setting a specific time, so that all can gather together and start the cleaning activity.

Identifying the polluter:

The polluter must be identified and subjected to financial penalties.

Additionally, proper arrangements should be made to use this money for cleaning and sanitation efforts.

Seminar and banner festoon:
Awareness campaigns
should be undertaken
through seminars and
banner festoons.

types of garbage:

Garbage bins must be separated according to the types of waste. For example, there should be a separate bin for plastic, a separate bin for glass, and a separate bin for paper waste. Additionally, each bin should be designated with a specific color

taking action in accordance with the law

Taking action against polluters while keeping your identity confidential by preserving relevant information. A specific amount of money must be fined according to the law
